

# Weigher helps make mixing easy

Weighing solutions from **CombiScale Inc. (Booth S2585)** helped solve a food-mixing problem.

**N**ature's Touch, a large Canadian packager of frozen fruits, came to **CombiScale Inc. (Booth S2585)** to find a solution for mixing up to four different IQF products into a single pouch. After originally considering a 24-head weigher from another vendor, CombiScale proposed using four 10-head Primo 360 weighers with a single control.

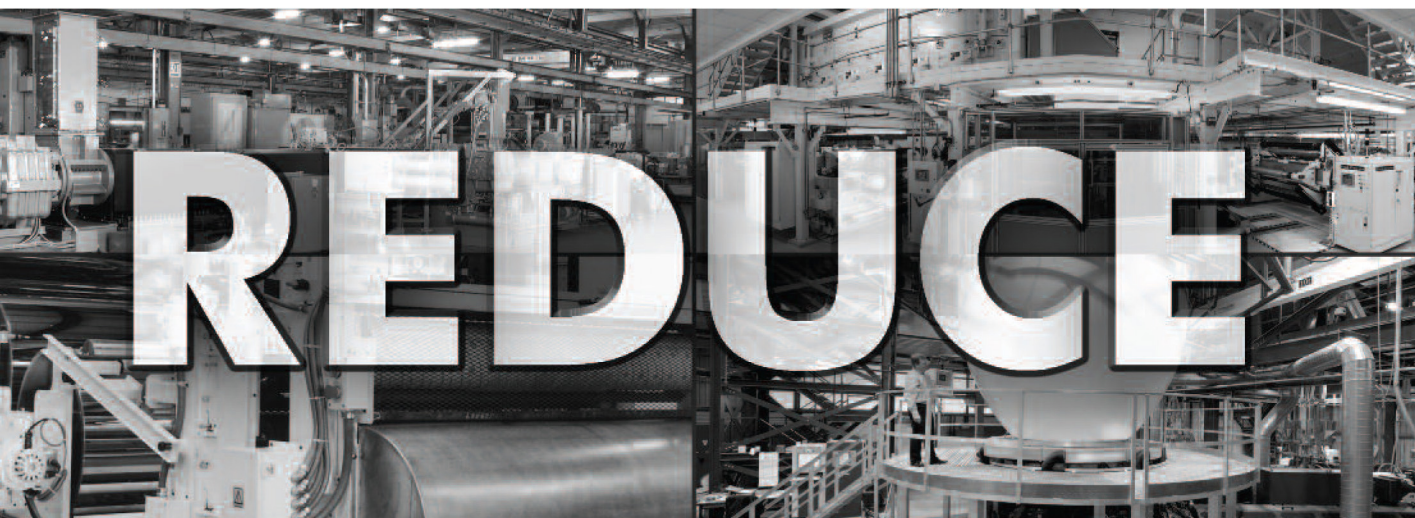

Nature's Touch, a Canadian frozen-fruit packager, uses **CombiScale's (Booth S2585)** Primo 360 weighers to customize its mixes.

This design would provide several advantages including a total system height at less than 7 ft., allowing for all the units to be easily cleaned and serviced. Most importantly, this system would allow Nature's Touch the flexibility to customize its mixes within seconds by either activating or deactivating a specific scale without having to make any adjustments to product infeed. Finally, by using four 10-head Primo 360 weighers, accuracy levels remained far superior than using a 24-head split in four or six heads per product.

**The first-ever open frame and PDA operated multi-head weigher in the world, the Primo 360's mechanical design and operating software are second to none.**

The first-ever open frame and PDA operated multi-head weigher in the world, the Primo 360's mechanical design and operating software are second to none. It is the easiest to clean and service, to adjust and operate. The operating software features today's most popular software including Windows, Crystal Reports, Skype, Real VNC, Log Me In, and more. The product is designed for operators, managers and stakeholders alike. **SD**

- > carbon footprint
- > raw material
- > energy

Converting customer ideas into successful products.

**Just how "Green" is Davis-Standard, LLC?** So green that we're growing new technology for energy and material savings all the time, while planting the seeds for more.

## Our Green market expertise includes:

- > **Capabilities** for coreless, recycling, and down gauging of film and sheet products.
- > **Equipment** used to manufacture key components for advanced batteries.
- > **Innovation** to process fluoropolymers and other resins used in solar panel encapsulation technology.
- > **Technology** for processing bioresins such as PLA or PHA for film and sheet products used in flexible and rigid packaging.

If you want to reduce your carbon footprint while improving efficiency, let us help you put a little green into your operation.
